PROJECTS

1. Resume Evaluator AI (Pydantic, FastAPI) [Github: Resume Evaluator AI](#)

- Developed an AI-powered resume evaluation system that analyzes resumes against job descriptions and generates ATS-style scores and personalized improvement recommendations through structured LLM-based analysis.
- Integrated PydanticAI, Groq API, and FastAPI to deliver structured, intelligent resume analysis.

2. EV Adoption Forecast Tool (AI & Machine Learning) [Github: EV Adoption Forecast Tool](#)

- Developed a machine learning regression model to forecast EV charging station growth using historical data
- Performed data preprocessing, feature engineering, and model evaluation using Scikit-learn and Pandas.

3. CIFAR-10 Image Classifier (Python, PyTorch, CNN) [Github: CIFAR-10 Image Classifier](#)

- Developed a Convolutional Neural Network (CNN) using PyTorch that classifies 32 x 32 RGB images into 10 object categories.
- Implemented data preprocessing, model training, and performance evaluation to build an accurate image classification model that achieved a 82% test accuracy on CIFAR-10 dataset.
